Please cancell claim 46.

Please amended claims 1 and 8 as following:

1. (Currently Amended) A personal computer comprising: a housing; a microphone built into the housing to detect noise ambient to the housing; a processor integrated into the housing, the microphone being coupled to the processor; a noise cancellation module operable on the processor, the noise cancellation module generating a noise cancellation signal responsive to the ambient noise detected by the microphone; and a digital signal processor coupled to the noise cancellation module and configured to mix the noise cancellation signal with an audio signal provided from a desired source to output a mixed signal, the digital signal processor being connected to a standard headphone compatible audio output connection integrated on the housing such that the mixed signal is available at the audio output connection; wherein the mixed signal reproduced by headphones connected to the audio output connection reduces noise perceived by a user wearing the headphones and listening to the mixed signal through the headphones; wherein the noise cancellation module applies a key click profile to the ambient noise detected by the microphone to compensate for a keyboard noise level detected by the microphone in the noise cancellation signal.

8. (Currently Amended) A method of reducing ambient noise normally heard by a user through headphones when listening to audio provided via a mobile computer system, comprising: detecting noise ambient to a case of the mobile computer system through a microphone built-in to the case of the mobile computer system; generating a noise cancellation signal based on the detected ambient noise; and mixing the noise cancellation signal with an audio signal from an audio source on the mobile computer system; supplying the mixed signal to a standard headphone compatible audio output connection on the case of the mobile computer system such that the mixed signal is available at the audio output connection; wherein the mixed signal reproduced by headphones connected to the audio output connection reduces the ambient noise perceived by a user wearing the headphones and listening to the mixed signal through the headphones; wherein the noise cancellation module applies a key click profile to the ambient noise detected by the microphone to compensate for a keyboard noise level detected by the microphone in the noise cancellation signal.
